Bieber Rollin Deep Y118 is one of the most recognizable names in the Red Angus industry. The herd sire has proven to be a multi-faceted breeding bull that has sired progeny throughout North America that have catapulted to the top in many areas of measure. His influence has been infused into many of the most significant cow herds and cow families throughout North America. The data, genotype and phenotype of his progeny have been assuring and reassuring with each subsequent calf crop. His sons and daughters rise to the top of rankings within most contemporary groups, in most breeders herds.

Bieber Rollin Deep Y118 is a calving-ease sire that combines trai- leading growth to

the genetic tabulation and EPD statistics. A remarkable spread from birth weight EPD to Yearling weight EPD further establishes the curve bending sire virtually in a class of his own. The progeny are all soft made and exhibit extra flank , more body depth and substantial top and shape to overall body mass. The sons have had a growing number of buyers, the purebred and commercial breeders have great appreciation for all traits of comparison.

Bieber Roosevelt W384, his sire, ranks in the 1% of the breed for maintenance energy. Bieber Boone 8000, the maternal grand sire, adds ease of fleshing to the pedigree and progeny.

The daughters by Bieber Rollin Deep Y118 are excellent cows. They milk from excellently conformed udders, with an abundance of milk. Bieber Rollin Deep Y118 is no longer producing viable semen, nor is he settling cows in a natural mating.

Bieber Red Angus Ranch and Silver Spur Ranches are retaining a small amount of semen for in herd use only. This is the last chance to obtain the direct influence of Bieber Rollin Deep Y118.

Semen is not exportable to Canada.
